

Reason Before Result

The explanation is written before the order can exist.

The explanation is part of the execution path

A receipt can prove code ran. The prior judgment proves why it ran.

Unknown never becomes approval

RELEASED

Every rule returns a structured pass.

Defined risk

Maximum loss within 2%

Usable quotes

Expiration and position caps

HELD

One failed or unreadable fact is enough to stop.

Naked exposure

Missing quote

Daily loss boundary

Unknown structure or bad type

A stop is a normal ledger event—not an exception to hide.

Alpaca is the hand—not a screenshot

ALPACA MCP

get_clock
get_account_info
get_all_positions
get_stock_latest_trade
get_option_chain
place_option_order

PROJECT POLICY

Pure selector
Plain-language judgment
Seven fail-closed rules
Append-only local ledger
Redacted request / receipt pair
No direct HTTP order bypass

Every order reaches Alpaca through the MCP tool named in the ledger and recording trace.

THREE INDEPENDENT CHECKS

**Verify the account.
Inspect the code.
Trace the cause.**

Dedicated paper account ID (private form)
Public repository + read-only demo
Judgment → gate receipts → Alpaca receipt
